The medical mafia and their reign of terror continues in the United States.

A very disturbing video from a woman in New Hampshire has emerged where she recorded hospital personnel and child social service agents trying to hunt down a father who reported he was giving his children Ivermectin.

There is allegedly a court order issued to remove the children from the custody of their father.

Today in the United States it is perfectly acceptable to abuse your child and attempt to murder them by injecting them

with an experimental gene altering shot that is not even approved by the FDA, but if you give your child a drug that IS approved by the FDA with a safety track record of over 30 years, they will take away your children because they want to inject them with a COVID-19 shot instead.

Also, Attorney Aaron Siri, a Vaccine Injury attorney [who is currently suing the FDA](#), has reported that the FDA is now seizing orders of Ivermectin coming into the U.S. ([Source](#).)
